

Flexible Extraction Arms

The SideArm SA6 / SA8 Series Flexible Source Capture Exhaust Arms collect process generated airborne particulate at the point of containment generation.

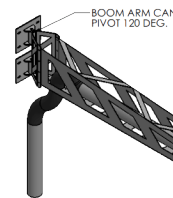

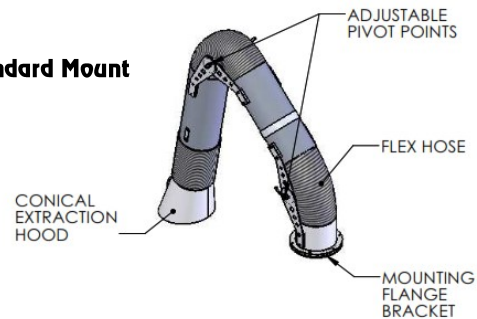

The ProVent SideArm is excellent for applications that need source capture in various positions. The self-supporting SideArm is capable of extending up to 10ft. from the equipment to give you plenty of room to operate around your application space.

Standard Features

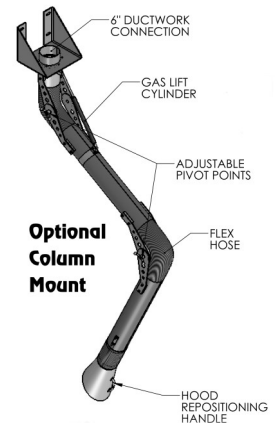

- **Externally Supported**
No interference in airstream and no internal parts to clean
- **Full 360 Degree Horizontal Rotation**
The rotational flange located at the base of the arm allows for full rotation
- **Flexible Arm Joints**
Three flexible joints allow for precise placement of the arm to the dust source
- **Aluminum Arm Sections**
Light components allows the arm to be fully extended without tipping the dust collection equipment
- **6" and 8" Standard Diameters**
- **Air Cylinder Assisted Movement**
The air cylinder helps adjust the arm without the user bearing the full weight of the arm
- **Conical Steel Hood**
The shape of the hood creates a fluid airstream into the extraction arm and allows enhanced capture of dust particulate from the application.
